

The Sherlock Holmes of Mileage Recorders

The Ohmer Recordograph knows all — tells all — about vehicle operation — whether it be motor trucks, trailers, tractors, railway cars, buses, taxicabs, cars of salesmen, or any other type of vehicle.

The operating manager can look over the accurate and unchangeable Recordograf record and at a glance determine every movement of a vehicle for every minute of the preceding 36 hours. It shows the mileage covered, speed traveled at all times, number of stops made, extent of time of each stop, and other data of inestimable value. Such basic information enables operators to reduce costs and increase efficiency of vehicle operation.

The Ohmer Recordograf and Ohmer Odometer, both transmission driven, and the Ohmer Hubodometer, which matches the hub caps, will give your trade the choice of three very fine mileage recorders to fit almost any need.

The dealer handling these and the many other Ohmer products will add a most profitable line to his business.
