

This view shows the Handy in position, between the carburetor and the intake manifold of the new Ford Truck Motor.

A Handy Governor Saved Him \$50,000

In Los Angeles recently a truck owner successfully defended a \$50,000 lawsuit, because his truck was governed automatically to a reasonable speed by a Handy Governor.

Your savings may never reach this figure but they will always pay big.

Your motor, and your whole truck will last longer, and require less repair and attention. There will be less risk of accident. Yet your driver will always command the full pulling power so generously built into the truck by its manufacturer.

Especially with a truck of such great reserve power as the new Ford, you need this standard speed control.

Trust the recommendation of your Ford dealer. Have him install your Handy when you take delivery of your new Ford Truck.

Three hundred thousand in daily use. Standard or preferred equipment on over 50 trucks. Simple, permanent, positive. New Model designed especially for the new Ford Truck by the organization that has supplied speed government for Ford Products over a whole decade.
