

Speed ↓

Proof— During the past season, The Boyle Valve Special, piloted by Cliff Woodbury, established 2 American 91½ cubic inch Speedway Records: 100 miles—average 131.772 miles per hour. 150 miles—average 132.058.

Boyle Valve Specials hold records on 3 Speedways—Culver City, for 50 and 100 miles. Atlantic City—100 and 150 miles. Altoona, Pa.—5, 10 and 25 miles. Woodbury, in the Boyle Valve Special, also won the 1927 A. A. A. dirt track championship.

Boyle Valves will give any motor greater speed—more power—faster pickup. And note this: In five hard gruelling races against the cream of American speed artists, the Boyle Valves were never removed from the motor. At end of fifth race, motor still functioned perfectly.

Boyle Valves are easily installed; silent; need no re-grinding; and stop all further pounding into the valve seats.
