

# 85% of the car manufacturers use HUTTO CYLINDER GRINDERS and endorse them for service work

## OUTSTANDING FEATURES

- 1—*Simple*, accurate, and fool-proof.
- 2—*Full Floating Cones* which compensate for uneven wear of stones.
- 3—*Operator controlled* expansion.
- 4—*No springs* are used to expand the tool which is always under control of the operator and stops its grinding action until re-set.
- 5—*Limits of one-half thousandth*, round and straight are easily maintained, even by an inexperienced operator.
- 6—*Will not load* the cylinder wall with abrasive material.
- 7—*Tool can be set* to true up cylinders to fit any standard oversize piston and will remove exactly the amount of stock necessary to clean up the cylinder.
- 8—*Economical*. Easy to buy—easy to use. Long life.

Illustration shows the new Hutto Grinder Stand which sells for \$48.50 complete, and the Hutto Model "AT" Cylinder Grinder (with Sleeve Adjustment) at \$55.00. The Model "A" Grinder at \$33.00 is identical, except it does not have sleeve adjustment.

Greater speed is possible with the Hutto "AT." Note the operator merely turns the knurled sleeve of the grinder to take a heavier cut. The "AT" has one and one-half thousandth adjustment at each setting, governed in three steps of one-half thousandth each.
